

Setting up SMS notifications of contact form messages

Using SMS service from [TextMagic](#)

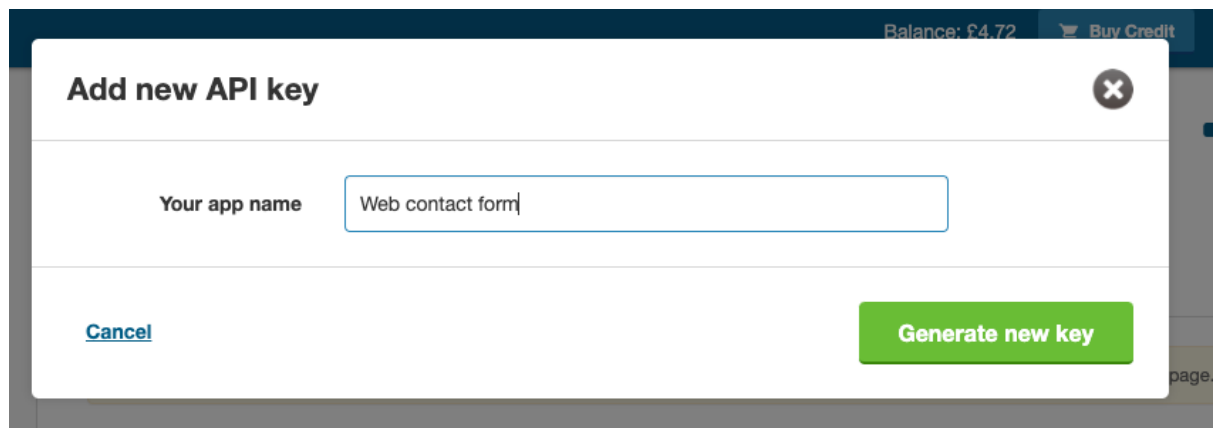

Sign up for an account with them, and then you can create your API key

<https://my.textmagic.com/online/api/rest-api/keys-trial>

And click on "Add New API key"

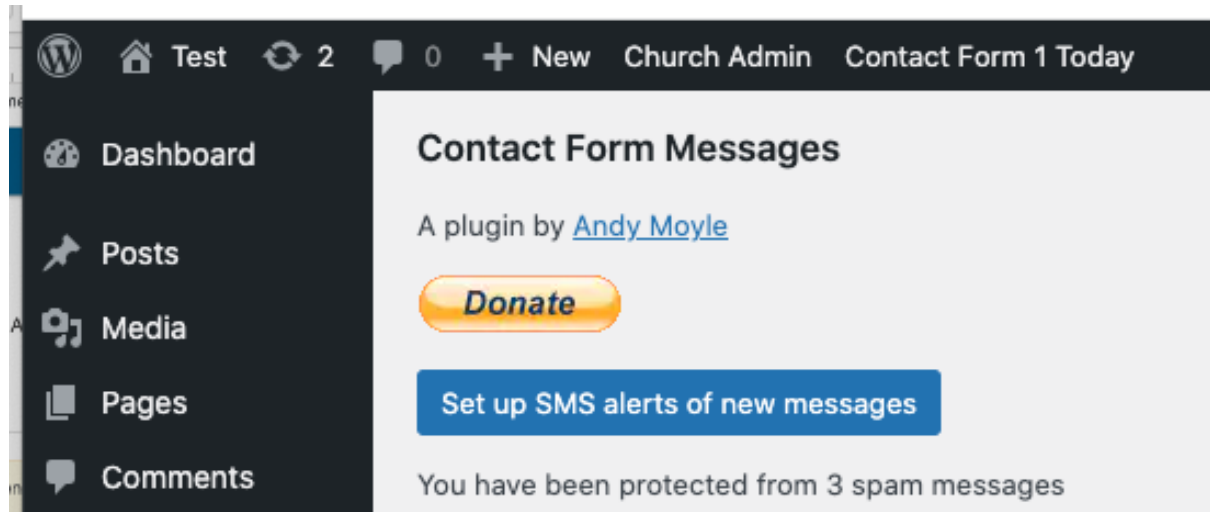

Give your key any name!

Then you can copy the API key and remember your username

Then head to your website, click on "Contact Form"

Click on "Set up SMS Alerts of new messages", enter the values and click Save. Your cell number has to be in the international format – in the UK put 44 at the start and delete the first 0.

From now on you will get an SMS notification for each successful Contact form submission – SMS credits are 4p in the UK.

There's an annoying iPhone quirk. You need to reply to yourself just the once before the links in the notifications will work.
