## Description

The page-in-page plugin has a very simple mission: *Insert posts and pages within each other with no stress.*

It provides possibilities to use both widgets and shortcodes. If using a widget you are only able to include pages within pages but if using the shortcode, you are able to insert posts/pages within other posts/pages.

## Installation

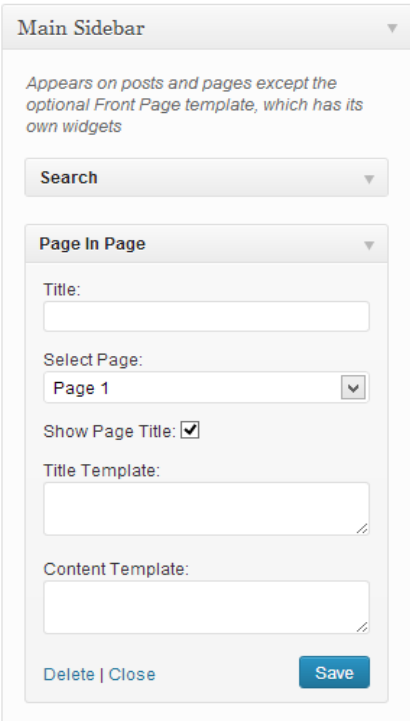

Download the zip file containing the plugin (viz page-in-page.zip)

1. Extract the zip file. You should find the a folder with name 'page-in-page'.
2. Upload the 'page-in-page' folder to the `/wp-content/plugins/` directory
3. Activate the plugin through the 'Plugins' menu in WordPress Admin
4. Read the usage instructions below

## Usage

### 1. Using the Widget

The widget settings include:

The screenshot shows the 'Main Sidebar' widget area in the WordPress admin. It contains a 'Page In Page' widget. The widget has a title field, a 'Select Page' dropdown menu (currently set to 'Page 1'), a 'Show Page Title' checkbox (checked), a 'Title Template' text area, and a 'Content Template' text area. At the bottom, there are 'Delete | Close' and 'Save' buttons.

Main Sidebar

Appears on posts and pages except the optional Front Page template, which has its own widgets

Search

Page In Page

Title:

Select Page:

Page 1

Show Page Title: ☒

Title Template:

Content Template:

Delete | Close Save

Title	Widget Title. This title will be shown as the page's title if 'Show page title' option is not selected.
Page	Select the page that will be included when widget is called.
Show page title	If checked (selected) then the page title will be shown and the 'Widget Title' ignored.
Title Template	<p>Insert an HTML template that will be used to display the title when widget is called. This setting is optional.</p> <p><b>YOUR TITLE TEMPLATE IF PROVIDED MUST HAVE the slug <code>\${page_title}</code></b></p> <p>Example of a Title Template:</p> <pre>&lt;h4 class="my-awesome-title"&gt;\${page_title}&lt;/h4&gt;</pre>
Content Template	<p>Insert an HTML template that will be used to display the page content. This setting is optional</p> <p><b>YOUR CONTENT TEMPLATE IF PROVIDED MUST HAVE the slug <code>\${page_content}</code></b></p> <p>Example of a Content Template:</p> <pre>&lt;div class="my-awesome-content"&gt;     \${page_content} &lt;/div&gt;</pre>

## 2. Using shortcode

With shortcodes, you can insert posts in posts, pages in pages, posts in pages and vice versa. To insert a shortcode you can do one of the following:

- To insert without specifying a template you can simply use  
`[twl_page_in id=123]` OR `[twl_page_in id=123 show_page_title=1]`.

`id` should be the ID of the post/page you want to insert.

The `show_page_title` attribute should be set to 1 if you want to show the page/post's title or 0 otherwise. Default value is 0.

- To insert your shortcode specifying a template for page/post's title and content use

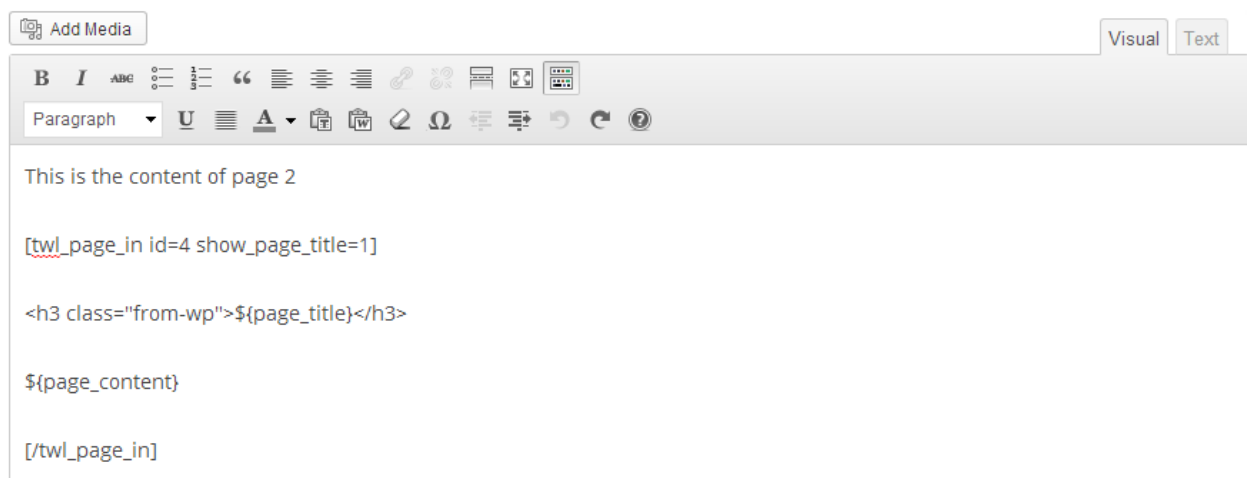

```
[twl_page_in id=123 show_page_title=1]
    <h3 class="my-awesome-title-class">${page_title}</h3>
    <div class="my-awesome-content-class">${page_content}</div>
[/twl_page_in]
```

The template specified in the `[twl_page_in]` tag will be used to display the page/post with the specified id when inserting it.

The template is optional and if not specified then the default template will be used.

**IMPORTANT!!!** If you specify a template, **you MUST** have the slugs `${page_title}` and `${page_content}` else you get unexpected results.

**IMPORTANT!!!** This template has to be defined when Editor is in 'Visual' mode and NOT in 'Text' mode (see image below). If you do not respect this you might have unexpected results because HTML tags might not be parsed properly.

## What Next?

Find a bug or got any worries? well never mind just send an email to [cyril.tata@hotmail.com](mailto:cyril.tata@hotmail.com) and your worries will be cleared in less an hour, yes less than an hour.

Future releases: Intergrate same functionality across multi sites.
